

CHENNA KESAVA REDDY YENUGU

Embedded Software Developer

Bangalore, India | +91-8074453994

chennakesava0517@gmail.com ♦ linkedin.com/in/chenna-kesava-b47901228

SUMMARY

Embedded Software Developer with hands-on experience in **C, Embedded C, and C++**, Linux system programming, and embedded software development. Strong understanding of **Linux internals, Yocto Project, ARM-based systems, and peripheral driver development**, with practical experience working with **CAN, UART, SPI, I2C, GPIO, and TCP/IP networking**. Currently working in **R&D at Suprajit Engineering Limited**, contributing to embedded software development and Linux-based embedded systems

EDUCATION

Bachelor of Technology (B.Tech) - Electrical and Electronics Engineering (Percentage: 78.2%)

JNTUA College of Engineering, Kalikiri

2021-2025

SKILLS

Programming Languages: C, Embedded C, C++

Embedded Systems: ARM7 Microcontroller, LPC2129, Peripheral Driver Development, Firmware Development

Networking & Communication: CAN, UART, SPI, I2C, GPIO, TCP/IP, UDP, Raw Sockets, Socket Programming

Operating Systems: Linux Internals, Linux System Programming, FreeRTOS (Basic Knowledge)

Debugging Tools: GDB, Embedded System Debugging.

Linux Framework: YOCTO-Project.

EXPERIENCE

Suprajit Engineering Limited(Embedded Software Developer - R&D)

05/2026 - present

Embedded Systems Trainee

06/2025 – 01/2026

Vector India Pvt. Ltd., Bangalore

Automotive ECU Communication using CAN protocol - Hands-on Training

- Developed and validated automotive ECU-to-ECU communication logic for vehicle control functions

PROJECTS

Automated Employee Attendance System using RFID technology

- Designed and developed a RFID-based real-time attendance system using LPC2129 ARM7 microcontroller to automate employee entry and exit tracking
- Used UART & SPI communication protocol to interface RFID reader, ensured reliable tag detection and data acquisition
- Developed Embedded C Firmware for Unique ID verification, attendance logging and system control with optimized memory usage.

Bus Reservation System (C, Data Structures using SMTP protocol)

- Developed a console-based bus reservation system using C programming
- Enhanced user experience by adding automated email alerts for seat booking, cancellation, and availability updates.
- Applied data structures for efficient record management

Multi-Client Chat Application (Linux IPC)

- Constructed server and multi-client chat application using message queues
- Implemented IPC mechanisms in Linux using C programming
- Tested communication across multiple terminals in Linux environment.

Smart Vehicle Parameter Monitoring system using High-Speed SPI and I2C Communication

- Implemented a real-time vehicle parameter monitoring system by interfacing multiple sensors using high-speed SPI.
