

CHENNA KESAVA REDDY YENUGU

Embedded Systems Engineer - Trainee

Bangalore, India | +91-8074453995

chennakesava0517@gmail.com ♦ [linkedin.com/in/chenna-kesava-b47901228](https://www.linkedin.com/in/chenna-kesava-b47901228)

SUMMARY

Embedded Systems fresher with hands-on experience in Embedded C, ARM microcontrollers, CAN protocol, Linux internals, and automotive ECU communication. Completed 8-month advanced embedded systems training with strong foundation in real-time embedded system validation and automotive ECU development.

EDUCATION

Bachelor of Technology (B.Tech) - Electrical and Electronics Engineering

JNTUA College of Engineering, Kalikiri

Percentage: 78.2%

2021-2025

SKILLS

Programming Languages: Embedded C, C, C++

Embedded Systems & Hardware: ARM LPC2129, UART, SPI, I2C, CAN

Networking & Communication: CAN, TCP/IP, UDP, Raw Sockets, Socket Programming

Operating Systems: Linux Internals, Linux System Programming

EXPERIENCE

Embedded Systems Trainee

06/2025 – 01/2026

Vector India Pvt. Ltd., Bangalore

Automotive ECU Communication - Hands-on Training

- Developed and validated automotive ECU-to-ECU communication logic for vehicle control functions
- Applied inter-ECU message flow for automotive indicators such as headlight and turn signals
- Designed control logic and validated system behavior under multiple test scenarios
- Executed Debugging, integration testing, and functional verification in real-time environment

PROJECTS

Bus Reservation System (C, Data Structures using SMTP protocol)

- Developed a console-based bus reservation system using C programming
- Enhanced user experience by adding automated email alerts for seat booking, cancellation, and availability updates
- Applied data structures for efficient record management
- Used file handling to store and retrieve booking data

Multi-Client Chat Application (Linux IPC)

- Constructed server and multi-client chat application using message queues
- Implemented IPC mechanisms in Linux using C programming
- Tested communication across multiple terminals in Linux environment

Online Exam System (C++) - ongoing

- Structured exam system using OOPS concepts and file handling
- Executed authentication for admin and user modules
- Added timer-based exam functionality

Academic Project – Load Frequency Control Optimization

- Built and simulated two-area interconnected power system
- Enforced PID, Fuzzy Logic, and ANFIS controllers
- Analyzed system stability and frequency deviation using MATLAB Simulink
- Compared controller performance based on response characteristics
